

# ControlPort™

## Extend your home control options

Turn any PC into a complete home control system!

The Superna ControlPort™ is a Digital Home building block that turns any PC into a home automation controller. The ControlPort connects to any computing device through a USB port and enables control of infrared, serial or relay devices, utilizing the processing power of your PC or Media Center PC (MCE) for Digital Home applications.

Plug-in your ControlPort to a PC or MCE on the home network, attach any device or system to the ControlPort connectors and you are ready to go.

Use ConfigNet™, our desktop software, to easily configure and manage your Digital Home and to personalize your automatically generated user interfaces. Control and operate the devices and systems connected to your ControlPort from various standard interface devices, such as PCs, MCEs, UMPCs, PDAs, TVs, or Touch Panels.

The Superna mission is to create standards-based software and hardware products that will make home automation accessible and affordable to everyone. Superna is committed to exceeding the expectations of our customers and to continuing our pioneering spirit by developing the latest products, systems, and services. With Superna, everything is under control!

## Benefits and Features

### Home Control and Automation

- Extends the capabilities of any PC or MCE to home control and automation.
- Utilizes the processing power of a PC for home automation tasks without taking over the whole PC.
- Provides a budget-conscious solution for connecting a broad range of household appliances and systems to your home network.
- Communicates with Superna control and interface devices throughout your Digital Home.

### Setup, Installation, and User Interface

- Easy placement in any home environment.
- No need for infrastructure other than a PC, MCE or Superna ControlBox™ and a home network.
- Connects through a USB port to any PC.
- Complete home automation setup within hours.
